

ROOMLINK

Department Staff Product Requirements Document

V1.0 - Pilot Release

Purpose

Give hotel staff a simple mobile-friendly workspace to receive, perform, update and complete guest-service tasks.

Operating model

One staff member may belong to one or multiple departments and can receive eligible work from each.

CONFIDENTIAL

Prepared for product design, engineering, pilots, and future implementation reference.

Document Control

Item	Detail
Product	RoomLink
Document	Department Staff Product Requirements Document
Version	V1.0 - Pilot Release
Classification	Confidential
Platform	Responsive web / PWA
Primary user	Department Staff
Pilot scenarios	110-room hotel with departmental teams; 15-room hotel with cross-department staff

1. Objective

Department Staff are the people who perform the guest-service work. RoomLink must help them see exactly what they need to do, act quickly, update the hotel team, and close tasks accurately.

- Receive tasks for each department the staff member belongs to.
- See only enough guest and task context to complete the service safely and correctly.
- Accept or report a problem, update progress, add operational notes, and mark work complete.
- Stay connected to Reception and an optional Department Manager without requiring complex software training.

Staff membership is many-to-many: one employee can work in Housekeeping + Restaurant + Maintenance, as required for the 15-room pilot.

2. Permissions and Boundaries

Department Staff can	Department Staff cannot
View assigned tasks and, where permitted, unassigned eligible tasks in their department(s).	View unrelated departments, other hotels, hotel-wide analytics or platform controls.
Accept, start, update and complete their own tasks; add internal notes; report blockers.	Configure departments, services, rooms/QR, menu, users, hotel settings, GST/legal details or subscriptions.
See task-specific room, service, priority, notes and guest messages necessary to fulfil the task.	Assign or reassign other staff unless a future role capability is added.
Receive in-app/push work alerts.	Access full guest history outside the active task/stay context.

3. My Work Dashboard

The first screen is a personal task queue designed for a phone. It must show what requires action now, with large clear status and priority cues.

Area	Requirements
Task counts	New/awaiting acceptance, in progress, completed today, delayed/escalated.
My task list	Room, service, department, priority, status, elapsed time and last update.
Department label	Every task clearly indicates the department that made the staff member eligible.
Quick actions	Open task, accept, start work, add update/note, report blocker, complete.
Alerts	New assignment, reassignment, urgent task, guest/reception update and escalation.

4. Task Detail

Task detail	Requirement
Work context	Room number, department, service, priority, requested time, current status and relevant guest-visible notes.
Assignment context	Assigned by Reception or Department Manager; show contact/communication context only as permitted.
Activity	Timeline of assignment, staff updates, notes, escalation and completion.
Actions	Accept/start, add progress update, attach a note where supported, report unable/blocker, mark complete.
Privacy	Display only the minimum guest information required to perform the task.

5. Task Lifecycle

State	Staff responsibility
New / Assigned	Review promptly; accept or report inability/blocker.
In Progress	Begin work and update progress if the task is delayed or needs coordination.
Completed	Mark complete only after the request is fulfilled; provide a short operational completion note if needed.
Unable / Blocked	Do not silently abandon work. Report the reason so Reception or the manager can reassign/escalate.
Cancelled / Escalated	Stop/continue based on direction and review the task timeline for next action.

6. Multi-Department Work

A staff member can be assigned to one or multiple departments. For V1, department membership equals eligibility; RoomLink does not yet model service-specific skills or complex scheduling.

Example	Expected behavior
Raju: Housekeeping + Restaurant + Maintenance	Raju may receive an extra towels request, a food-order task, or an AC issue, if assigned by the configured routing flow.
Suresh: Housekeeping only	Suresh receives Housekeeping tasks only.
Priya: Housekeeping + Laundry	Priya can be assigned eligible work for either department.
Competing tasks	The staff member can see priorities and elapsed time; Reception/Manager coordinates reassignment when workload conflicts occur.

Department assignment does not mean every future service skill is covered. V1 deliberately keeps eligibility simple; skill/certification controls are later scope.

7. Relationship with Reception and Department Manager

Role	Department Staff relationship
Reception	Hotel-wide coordination point. Reception may assign/reassign, communicate guest updates, monitor status and escalate.
Department Manager (optional)	When assigned, the manager owns the departmental queue, coordinates staff and resolves blockers.
Hotel Admin / GM	Configures departments, services and staff memberships; has hotel-wide oversight and can intervene.
Guest	Receives service and may receive status updates through the RoomLink workflow; staff communication must follow hotel policy.

8. Department-Specific Examples

Department	Typical staff task
Housekeeping	Deliver towels/water/toiletries, clean room, provide pillow or blanket.
Maintenance	Inspect or fix AC, TV, Wi-Fi, plumbing or electricity; immediately report critical/safety conditions.
Restaurant	Prepare/fulfil a food order and update availability/progress through the defined workflow.
Custom department	Complete the service or report a blocker according to hotel-configured operating instructions.

9. Notifications, Communication and Audit

V1 uses in-app and push notifications for new assignments, reassignments, urgent tasks, escalation and updates needing attention. Staff can add internal operational notes. Every accept, progress update, inability report, status update and completion is recorded in the request timeline.

10. Navigation and UX Requirements

Navigation	Purpose
My Work	Personal active task queue.
Task History	Completed and past tasks, where permitted.
Notifications	Alerts requiring staff attention.
Profile	Own account, availability/status if configured, and sign-out.

- Mobile-first PWA with large targets and minimal typing.
- Few-click path: open -> accept -> start -> update -> complete/report blocker.
- Clear state, department, priority and room at a glance.
- Loading, empty, error and success feedback states.
- Require confirmation/reason for a task unable, cancellation or completion exception.

11. Acceptance Criteria

Area	Acceptance criteria
Eligibility	Staff receive work only from departments they belong to.
Multi-department	One staff member can receive eligible tasks from multiple assigned departments.
Execution	Staff can accept/start, update, report blockers and complete assigned work.
Context	Every task gives the room, service, department, priority and relevant notes.
Coordination	Reception and optional Department Manager see staff progress and can intervene.
Boundaries	Staff cannot alter hotel setup, users, rooms/QR, legal/GST, menus or platform settings.
Auditability	All material staff actions appear in the task/request timeline.

12. Pilot Acceptance Tests

Pilot	Required Department Staff test
Hotel A - 110 rooms	A staff member receives a manager-assigned task, accepts it, updates progress, completes it, and the result appears to both Manager and Reception.
Hotel B - 15 rooms	Raju receives eligible tasks across Housekeeping, Restaurant and Maintenance from Reception without a Department Manager account.
Exception test	A staff member reports unable/blocker; Reception or Manager sees it immediately and can reassign/escalate.

13. Non-Goals

- Team management, staff/user provisioning, department setup, room/QR management and GST/legal data.
- Advanced scheduling, rostering, payroll, inventory, accounting and POS.
- Skill certification/permission engine, GPS tracking, AI chatbot, CRM and loyalty.
- Guest account management beyond task-specific service delivery context.

14. Final V1 Principle

Department Staff is the execution layer of RoomLink: give each employee only the eligible work and context they need, make progress visible, and ensure no request is silently lost.

The Staff experience must work equally well for a specialist in one department and a cross-department employee in a small hotel.
